SUMMARY

Data Analyst | Business Analyst | Tableau & SQL Specialist with 3+ years of experience in predictive modeling, real-time reporting, and dynamic dashboard development. Proven success in risk management and high-volume environments, driving revenue growth, improving operational efficiency, and ensuring data integrity. Proficient in Python, SQL, Tableau, Power BI, regression analysis, and Agile/Scrum methodologies.

WORK EXPERIENCE

- Bet365

Trading Assistant

Jan 2024 - Present

 - Collaborate with traders and analysts to deliver accurate real-time event data, ensuring high-quality data entry and insightful reporting.
 - Built predictive models in Python using regression analysis to forecast betting trends, contributing to a 9% boost in revenue.
 - Queried user behavior data from databases of 20M+ using MySQL, delivering insights to traders that enhanced decision-making speed.
- FanDuel

Data Analyst

Aug 2021 - Jan 2024

 - Utilized SQL for data cleaning, transformation, and validation to ensure high data quality and reliability.
 - Collaborated with cross-functional teams to develop dashboards and reports using PowerBI and Tableau.
 - Led the development of the 'Bet 5 Get 150' promotion, contributing to a 70% increase in revenue.
- Verisk - Data Driven Safety (Contract Role, Concurrent with FanDuel)

Quality Assurance Data Analyst

Sep 2022 - Mar 2023

 - Employed Digital Media Forensics to detect anomalies in claim documents and photos, improving the accuracy of suspicious claim identification.
 - Identified and resolved data quality issues, resulting in a 20% enhancement in data integrity.
 - Designed interactive dashboards in Tableau and Power BI, increasing stakeholder accessibility to real-time data.
- Office of Innovation

Data Science/Information Technology Intern

Jul 2021 - Sep 2021

 - Analyzed and refined data from multiple sources to ensure accuracy and reliability for ongoing projects.
 - Developed data visualizations and dashboards using Tableau and Power BI to enhance information accessibility for stakeholders.
 - Collaborated with team members and department officials to support the achievement of project objectives related to infrastructure repairs in Jersey City.

EDUCATION

- Saint Peter's University

Master of Science, Data Science

Jersey City, NJ
May 2022
- Saint Peter's University

Bachelor of Science, Business Management

Jersey City, NJ
May 2020

PROJECTS

US-Ontario Fixture Optimization Tool / Trading Assistant , Bet365 Internal Project

- Situation: Bet365's US and Ontario domains had discrepancies in fixtures shown due to differing state exclusions, causing manual checking delays and potential compliance issues.
- Task: Create a system to streamline verification across multiple state-specific betting sites and reduce manual work.
- Action: Designed and implemented an Excel-based tool that automatically imports and compares fixture data from all Ontario and US Bet365 domains. Integrated a flagging system with green "O" for correctly placed fixtures and blank "1" for potential errors.
- Result: Enabled quick visual checks of fixture accuracy across domains, saving each team member an average of 1 hour per shift and reducing the risk of compliance errors.

Bet \$5 Get \$150 Promotion / Data Analyst, FanDuel

- Situation: FanDuel needed a compelling promotion to drive new user acquisition and increase revenue.
- Task: Design a low-risk, high-reward promotion that encouraged customer engagement and long-term retention.
- Action: Analyzed wagering behavior of new users and identified that a \$5 first wager paired with a \$150 bonus
- (delivered as non-withdrawable bonus bets) would maximize user engagement and minimize acquisition cost.
- Result: Campaign led to a 70% increase in revenue and was later adopted in various forms by every major sportsbook
- in the industry.
